First of all we would like to welcome everyone who decide to join our project and support this community. The concept of the project is to build the strongest community in the world where everyone will have a voice and where everyone can decide about next steps in the project.

We want to make sure that the project is very transparent and that everyone knows about every step we do. From our experience there are many projects which do not provide much information about the actual projects themselves which is leading to unnecessary FUD which can potentially ruin the token itself as people will just dump it. That's why we want to make sure everyone are clear about our project and that everyone know all the information they should know.

Furthermore, we want to make our project fully decentralized which means that not one entity have control over whole ecosystem but the community controls the ecosystem and everything that will happen to this project is just fully driven by people of the crypto.

Total supply:	100,000,000,000
Initial burn:	50,000,000,000
Burnt LP:	47,500,000,000
Development and marketing:	2,500,000,000

PLEASE BE AWARE OF ANY SCAM TOKENS THAT PRETEND TO BE OUR TIKTOKEN. ADMINS OF OUR PROJECT WILL NEVER SEND PRIVATE MESSAGE TO ANYONE. ANY

To increase the value of the token at the beginning we have decided to send 50% of all token supply to a dead wallet which has effectively removed 50% of the tokens from circulation, this way no one can hold over 50% of the supply and control the token (decentralization). Furthermore, 47.5% of the supply was distributed to the circulation and liquidity has been provided on PancakeSwap. The remaining 2.5% will be placed in our dev wallet for marketing and development purposes ONLY!!! We will inform community if any of tokens from that wallet will be moved and the purpose of that movement. This means that if any of team members would like to own tokens, they will have to purchase using their personal money just like any other member of the community.

Many of you also might ask why there are no tax on transactions. The reason is that CEX exchanges don't like idea of having tax on tokens because then they would have to put tax on their side and they obviously do not want to do that therefore we have decided to not have any tax on the transactions and encourage faster adoption by major exchanges around the world which will potentially lead to exponential growth.

STAGE 1

Q3 2021

- Token deployment
- Website launch
- Whitepaper
- Liquidity on PancakeSwap

STAGE 2

Q3/Q4 2021

- Automatic locked liquidity to token after pre-sale on PancakeSwap
- Listing on Coingecko&CoinMarketCap
- Weekly competitions for best Tik Tok's advertising TikToken
- Marketing campaigns
Token audit
More exchanges listings

STAGE 3

Q4 2021

- Listing on CEX
- NFT Tokens
- Daily competitions for best Tik Tok's with different categories

We are first ever project to introduce such an amazing opportunity for the community.

The idea behind the whole project was to not to only create tokens but to reward the amazing community we are going to create. One of our ideas is to create weekly competitions for the community where people can show their creativity and win TikTokens. Every week people will decide which TikTok promoting TikToken will win equivalent of \$100 in TikToken. Every winner will be verified before sending funds which means that fake accounts won't win. As the project expands we will introduce different categories for TikTok's and we will try to introduce not only weekly competitions but daily competitions as well. Let's make TikToken VIRAL!!!

The further information about rules and how the competitions will work will be added in next update of Whitepaper as well as our social media so make sure to follow all of them to be up to date!

TTSwap:

One of our main goals for future is to build unique fully decentralized exchange which will allow people to stake and farm different tokens and earn rewards. The TTSwap will be first adopted with BSC blockchain.

Multiple tokens:

We want to start small and grow big. Taking small steps at the time which will allow us to develop all the ecosystem perfectly without any errors. There are plan to create different types of tokens in future and each of the token will have their own purpose so the whole ecosystem work together.

Own blockchain(Name TBA):

Next year we plan to develop our own blockchain which will be used on our DEX TTSwap. The blockchain will be constructed in the that fees will be kept to the minimum. As we all know the fees are now the biggest issue especially for ETH blockchain. So our idea is to create blockchain which will allow investors with small amounts to join as they will not have to pay fees higher than their investments.
